## **Siverside Detectors to Supply Neutron Detectors for DHS Radiation Security Program**

Siverside Detectors, a Smiths Detection subcontractor, announces their participation in the final award of the Radiation Portal Monitor Replacement Program with the Department of Homeland Security (DHS) Countering Weapons of Mass Destruction (CWMD) office.

The CWMD mission enables Customs and Border Protection to respond accurately and efficiently to suspected radiological and nuclear threats entering the United States. The Radiation Portal Monitor Replacement Program updates critical technology used to screen cargo at all domestic ports of entry for radiation and nuclear threats. Siverside was selected as the neutron detector supplier by Smiths Detection (IDIQ contract holder), as part of a team that includes Radiation Solutions, Inc.

On why Siverside was chosen, Smiths Senior Director of Government solutions, Jeff Harper, states, *“Siverside’s proven superior performance, reliability, and commitment to quality gives us confidence that we have the right partnership to provide an unparalleled solution for our customer.”*

Andrew Inglis, Siverside founder and CEO, states: *“We are proud to bring cutting-edge research and manufacturing from Cambridge, MA to protect citizens across the United States.”*

The RPM systems will be deployed at high-volume points of entry, replacing hundreds of units over the next two years. Siverside’s neutron detection technology was sponsored by DARPA programs and is now commercially available worldwide.

### **About Siverside Detectors**

Siverside Detectors helps agencies and communities prepare to disrupt threats of nuclear and radiological terrorism. The company's highest priority is to operationalize cutting-edge technology for real world protection. This drives a commitment to develop cost-effective sensors and efficient deployment strategies, to lower the barrier to entry for next-generation radiation security.

Founded in 2013 by a nuclear physicist and public policy expert, Siverside builds detection hardware and security solutions for private customers, as well as the Department of Defense and Department of Homeland Security.
